**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently amended) A storage medium storing a key task processing program which, when executed by a computer system, executes key task processing by using an OS and a key task processing database, the key task processing program causing a computer terminal to:

accept a connection, via a network, from a user terminal;

determine whether a display format of the user terminal is dependent on an operating system of the user terminal;

convert data from the key task processing database into ~~a format compatible with a screen in window format or~~ a format compatible with a screen in web format ~~based on the determination~~ if it is determined that the display format is not dependant on the operating system;

display the screen in window format, using functionality of the operating system, on a display section of the user terminal if it is determined that the display format is dependent on [[an]] the operating system; [[and]]

display the screen in web format, using a web browser, on the display section of the user terminal if it is determined that the display format is not dependent on [[an]] the operating system; and

convert data from the user terminal into a format compatible with the key task processing database if it is determined that the display format is not dependent on the operating system.

2. (Currently amended) A storage medium storing a key task processing program which, when executed by a computer system, displays a screen in window format and a screen in web format at a user terminal by using an OS and a key task processing database, the key task processing program causing a computer terminal to:

accept a connection, via a network, from the user terminal;

determine whether a display format of the user terminal is dependent on an operating system of the user terminal;

convert data from the key task processing database into ~~a format compatible with the screen in window format or~~ a format compatible with the screen in web format ~~based on the determination~~ if it is determined that the display format is not dependant on the operating system;

display the screen in window format, using functionality of the operating system, on a display section of the user terminal if it is determined that the display format is dependent on [[an]] the operating system; [[and]]

display the screen in web format, using a web browser, on the display section of the user terminal if it is determined that the display format is not dependent on [[an]] the operating system; and

convert data from the user terminal into a format compatible with the key task processing database if it is determined that the display format is not dependent on the operating system;

wherein the user terminal:

allocates input assisting functions preset to a plurality of predetermined keys on a keyboard of the user terminal,

displays the names of the input assisting functions, and

when a detection is made that the predetermined keys are pressed down or the names of the input assisting functions are selected, executes the input assisting functions.

3. (Canceled)

4. (Previously presented) The storage medium according to claims 1 or 2, characterized in that the input assisting functions displayed on the screen in window format or the screen in web format allocate input assisting functions related to the screen currently displayed.

5. (Previously presented) The storage medium according to claim 4, characterized in that the input assisting functions displayed on the screen in window format or the screen in web format allocate input assisting functions related with a cursor position on the screen currently displayed.

6. (Previously presented) The storage medium according to claim 1 or 2, characterized in that the key task processing program includes one or more of a finance and accounting program, a payroll calculating program, a sales management program, a purchase control program, a stock control program, a tax declaration program, a fixed asset control program, a cost management program, a client management program, a human resource management program, and an electronic banking program.

7. (Currently amended) A key task processing system for transmitting/receiving data to/from a user terminal of a user via a network, comprising:

a key task processing database that stores data for executing key task processings of a company;

a key task processing means for executing the key task processing by using the data in the key task processing database;

means for determining whether a display format of a user terminal is dependent on an operating system of the user terminal;

means for converting data from the key task processing database into ~~a format compatible with a screen in window format or~~ a format compatible with a screen in web format ~~based on the determination~~ if it is determined that the display format is not dependant on the operating system;

means for:

displaying the screen in window format, using functionality of the operating system, if it is determined that the display format is dependent on an operating system; and

transmitting or receiving the data via the network to/from the user terminal, the user terminal accepting input of the key task processing in window format; [[and]]

means for:

displaying the screen in web format, using a web browser, if it is determined that the display format is not dependent on an operating system; and

transmitting or receiving the data via the network to/from the user terminal, the user terminal accepting input of the key task processing in web format; and

means for converting data from the user terminal into a format compatible with the key task processing database if it is determined that the display format is not dependent on the operating system.

8. (Previously presented) The key task processing system according to claim 7, characterized in that the user terminal which displays a screen of the key task processing in window format comprises:

a data converting function which converts the data in the key task processing means into a data format processable in window format;

an input assisting function used on a screen on which the data are displayed; and

a display function which combines the converted data with the extracted input assisting function to thereby display them on the screen in window format;

wherein the means for web format transmits contents of the screen in web format in document format to the user terminal which accepts the input of the key task processing in web format.

9. (Previously presented) The key task processing system according to claim 7 or 8, characterized in that when the data to be used in the key task processing means are transmitted in web format to the user terminal which accepts the input of the key task processing in web format, the means for displaying a screen in web format extracts the input assisting function to be used on the screen on which the data are displayed and combines the extracted input assisting function with the data to thereby transmit contents of the screen in web format.

10. (Previously presented) The key task processing system according to claim 8, characterized in that the means for displaying a screen in web format comprises:

a data converting means which converts the data in the key task processing means into a data format processable in web format;

an input assisting means which extracts the input assisting functions to be used on the screen on which the data are displayed; and

a web screen creating means which combines the data converted by the data converting means with the extracted input assisting functions to thereby create the screen in web format.

11. (Previously presented) The key task processing system according to claim 8, characterized in that the input assisting functions are related with function keys on a keyboard of the user terminal, and when a cursor position is changed on the screen, the key task processing system changes a corresponding relationship between the input assisting functions and the function keys and changes display of the names of the input assisting functions on the screen according to the change of the corresponding relationship.

12. (Previously presented) The key task processing system according to claim 8, characterized in that the input assisting function receives pressing-down of the function key, or receives selection of the name of the input assisting function on the screen using a pointing device, and executes the related input assisting function at the user terminal.

13. (Currently Amended) The key task processing system according to claim 7, characterized in that the key task processing means, when a new table or row is added, adds any one of a predetermined character, number, or symbol to a head of the table name or the row name and stores it in the key task processing database, and when data of the key task processing database is saved, saves a table or a row predetermined by the key task processing means and a table or a row having the predetermined character, number, or symbol at the head of the table name or the row name.

14. (Currently Amended) The key task processing system according to claim 7, characterized in that when the key task processing means stores the row newly added by a user in the key task processing database, a function which is set by accepting the setting of a row name, a data type, and a data length of the added row as arguments of the function executes a writing/saving process which stores the data of the newly added row in the key task processing database.

15. (Currently Amended) The key task processing system according to claim 7, characterized in that the user terminal which accepts the input of the key task processing in window format includes:

an additional menu definition file which defines contents of additional menu items to be displayed on a menu bar provided in a frame of

the screen in window format or on a menu area provided in the screen in window format; and

an additional menu display/calling execution file which reads a menu title or a menu button, which is added to the menu bar on the display of the menu items in the menu area, and an additional menu group, which is displayed on a drop-down menu or an additional menu list when the menu title or the menu button is selected[[,]] from the additional menu definition file[[,]]; displays them on the menu bar or on the screen in window format[[,]]; and reads and executes a related execution file, with which the additional menu is related, when the additional menu is selected.

16. (Currently Amended) The key task processing system according to claim 7, characterized in that the key task processing includes at least one or more of a finance and accounting processing, a payroll calculation processing, a sales management processing, a purchase control processing, a stock control processing, a tax declaration processing, a fixed asset control processing, a cost management processing, a client management processing, a human resource management processing, and [[an]] electronic banking.

17. (Previously Presented) The key task processing system according to claim 11, characterized in that the input assisting functions are related with function keys on a keyboard of the user terminal, and when the screen is changed, the key task processing system changes a corresponding relationship between the input assisting functions and the function keys and changes display of the names of the input assisting functions on the screen according to the change of the corresponding relationship.

18. (New) A method for executing key task processing by using an OS and a key task processing database, the method comprising:

accepting a connection, via a network, from a user terminal;

determining whether a display format of the user terminal is dependent on an operating system of the user terminal;

converting data from the key task processing database into a format compatible with a screen in web format if it is determined that the display format is not dependant on the operating system;

displaying the screen in window format, using functionality of the operating system, on a display section of the user terminal if it is determined that the display format is dependent on the operating system;

displaying the screen in web format, using a web browser, on the display section of the user terminal if it is determined that the display format is not dependent on the operating system; and

converting data from the user terminal into a format compatible with the key task processing database if it is determined that the display format is not dependent on the operating system.
